

FLAMINGOS

Phoenicopterus roseus

Facts

- Flamingos can be red, orange, or pink. The food that they eat—shrimp, plankton, algae, and crustaceans—give them their color.
- They can run on water, picking up speed before they take flight because they have webbed feet.
- Flamingos eat upside down. Putting its head in the water it sucks up water and small mollusks and crustaceans and filters the water through its beak retaining the food it needs.
- A flock/group of flamingos is called a **stand** or a **flamboyance**.

1 Corinthians 10:31

So, whether you eat or drink, or whatever you do, do all to the glory of God.
