

Jellyfish

Have you ever taken a walk through the woods and wondered what was living in all those holes in the ground? Or maybe you've walked past a dark cave and imagined what kind of animal made its home there? Our world is full of mysteries—creatures beyond our imagination and places that we've never been before.

One of the most mysterious places is beneath the ocean's surface. There are countless interesting sea creatures that make the ocean waters their home, including the fascinating jellyfish.

The name *jellyfish* perfectly describes what they look like. They are gelatinous and transparent, meaning that you can see right through them. They may look harmless, but they are much more dangerous than a bowl of Jell-o! Jellyfish have several tentacles that hang down from their *jelly* top. God gave each of these tentacles tiny stinging cells that can paralyze just about anything that touches them.

Because the jellyfish is equipped to protect itself, it doesn't have many predators. Only animals that aren't hurt by its sting can actually eat them; all the other sea creatures avoid contact. Even humans know that it's important to be very careful around them!

Many jellyfish are clear, but others can be found in vibrant pink, yellow, blue, or purple colors.

Bible Lesson

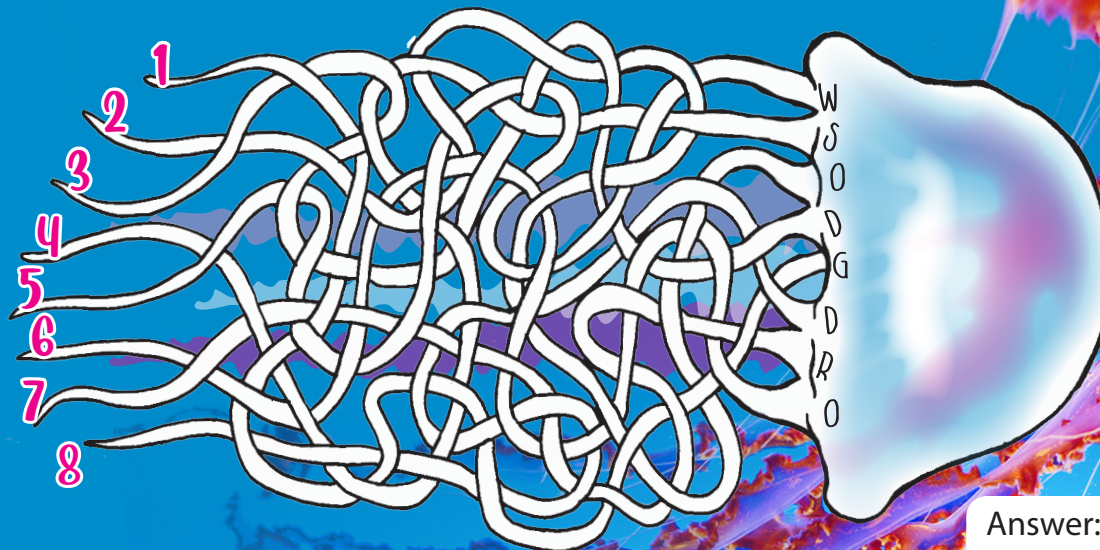

Like the jellyfish, we also live in a dangerous world. The devil is doing everything he can to keep us out of Heaven. We must protect ourselves against him. God knew we would need His help, so He gave us His Word. The Bible is our best protection against the attacks of the enemy. Don't forget to spend time with Jesus each day, reading His Word and listening to His voice. He will help you win the battle against Satan!

“And take the helmet of salvation, and the sword of the Spirit, which is the word of God.”

Ephesians 6:17 (NKJV)

Tangled Tentacles

Follow the numbers to find the order of the letters and fill in the answer.

Answer:
